Defining replications

Mittwoch, 14. Mai 2025 13:30 (1 Stunde)

Replication studies can take many forms (e.g., direct and conceptual replications). In my talk, I will present the replication study taxonomy that we developed to provide orientation for researchers, reviewers, and editors. Our taxonomy explicates that different types of replication studies serve different purposes and functions in the process of knowledge generation. Thus, the different replication studies also have different places within a systematic and cumulative research process.
